

## National Severe Weather Warning Service

### Chief Forecasters Assessment

A cold airmass covers northern Britain. Where skies are clear, rapidly falling temperatures early this evening will lead to the formation of icy patches on untreated surfaces, especially where rain, sleet or snow has fallen on Friday or where there is seepage of water as a consequence of recent wet weather.

Meanwhile, snow affecting parts of the southern half of Scotland during the early part of Friday evening will tend to become lighter and patchier in nature. Further outbreaks of snow, mainly over hills, are, however, likely to return to parts of northern England and southern Scotland during the early hours of Saturday.

The Met Office have issued a **Yellow Warning of Ice**

Valid from **17:00 on Fri, 08th Jan 2016** until **10:00 on Sat, 09th Jan 2016**

Snow affecting parts of the southern half of Scotland during the early part of Friday evening is expected to gradually die out. Where snow has fallen on Friday, widespread ice as well as frozen slush is expected. Elsewhere within the warning area, icy patches are expected on untreated surfaces from Friday evening onwards into Saturday morning. Please be aware that this could lead to some difficult driving conditions.
